Terms of Use & Subscription

Applies to ARMADA Antivirus 2.0.0 · Android / Google Play edition

Publication and applicability

The publication date of this revision is 22 October 2026. This revision updates technical feature descriptions and navigation for ARMADA Antivirus 2.0.0. These terms apply when made available to you as part of the offer you accept. Publication alone does not replace an accepted purchase or provide consent to a change that requires your agreement. Accepted prices, purchase phases and mandatory rights are not changed by these technical clarifications.

1. Who supplies ARMADA Antivirus

ARMADA Antivirus is supplied by ADVANCED CYBER SECURITY DOO BEOGRAD - VRACAR, RUDNICKA 8, Beograd (Vracar), 11000, Serbia. Support and subscription enquiries: support@acs.co.rs.

These terms govern use of ARMADA Antivirus for Android, package com.armada.antivirus, and annual subscriptions purchased through Google Play when made available to you as part of the offer you accept. Google Play also applies its own payment and service terms. These terms do not remove any mandatory rights available to you under applicable law.

2. What you receive

With verified active access, ARMADA provides supported local scanning, signed AMDB threat-definition updates while the update service is maintained, local scan history, supported quarantine and restore, user-started Protection and optional Daily Scan within Android's access and execution limits.

You may install and use the app on supported Android devices for which your purchase or other valid entitlement can be verified through the supported licensing and recovery process. A subscription is access for its provider-confirmed period, not ownership of the software or a perpetual licence. It does not include another ARMADA product, desktop or iOS access, or an automatic family or transferable licence.

A purchase requires your explicit confirmation in Google Play. Installing the app, verifying a Google account, opening a purchase screen or reading these terms does not by itself start a paid subscription.

Contents: subscription and offers (section 2); cancellation and refunds (section 3); account recovery and privacy (section 4); scanning and updates (section 5); proper use and consumer rights (section 6); changes and contact (section 7).

Previously purchased Google Play Lifetime rights retain their applicable terms. Manual/Promo activation and legacy Review access are retired in version code 86. Private app-review access uses its separate current code and enables the same antivirus features without a purchase. An older standalone trial does not become a paid subscription merely because the subscription model is now available.

Annual subscription & offers

Review the complete price and renewal terms in Google Play before you confirm.

3. Annual Protection

Annual Protection is an automatically renewing annual subscription. After an eligible free trial or an immediately charged first annual period, Google Play charges the renewal price for each further year unless you cancel before the applicable renewal deadline.

The regular base pricing model is USD 19.99 per year. The actual amount payable, currency, applicable taxes, any introductory phase and renewal price are the localized amounts shown by Google Play at checkout and in your subscription details. The charge is annual; a monthly equivalent does not mean monthly billing.

Where no trial is available, the annual offer is charged according to the purchase sheet when you confirm. Google Play controls payment processing. ARMADA activates access only after the purchase and ownership have been verified; pending or unverifiable payment evidence is not an activated licence.

4. Eligible 7-day free trial

An eligible Google Play subscription offer may begin with seven days free. It converts automatically to the paid annual subscription at the end of that trial unless you cancel before the deadline shown by Google Play. Review the first charge, trial end date, renewal price and cancellation method before confirming.

Eligibility depends on the available Google Play offer and ARMADA's verified account, first-phone and anti-abuse checks. The original account trial belongs to its first qualifying phone. Reinstallation can recover only its remaining time in a supported signing and Android-profile context; it does not reset the trial or transfer that trial to another phone.

A trial is not guaranteed for every account, installation or device. An existing older standalone trial retains its original expiry and no-charge meaning; it does not enroll you in a Google Play subscription without an explicit purchase confirmation.

5. Founding 100

When offered and eligible, Founding 100 has the same product functionality as the regular annual subscription. Its pricing model is seven days free, then a discounted first paid year based on USD 9.99, followed by the regular annual renewal price based on USD 19.99. Google Play displays the actual localized amounts and phases. The first-year discount is not permanent.

Trial and checkout reservations hold availability; Founding membership is recorded after the first successfully paid year begins. A canceled unpaid trial is not a completed paid membership. Completed memberships remain recorded after cancellation or refund and are not recycled. Test subscriptions use separate capacity.

Processing delays can allow an already accepted offer to complete after availability closes. Its accepted price is honored and the extra membership is recorded, so the name does not guarantee exactly 100 completed payments. Ordinary cancellation and resubscription do not create a right to another introductory year.

Founding status does not confer company ownership, voting rights, revenue participation or perpetual protection access.

Cancellation, billing & refunds

Manage the subscription with the Google Play account that made the purchase.

6. Managing and canceling renewal

In ARMADA, use Settings > License & account > MANAGE SUBSCRIPTION. Alternatively, open Google Play, choose the purchasing account, then open Payments & subscriptions > Subscriptions and select ARMADA Antivirus.

To avoid the first charge after a free trial, cancel before the trial-end deadline shown by Google Play. To stop a later renewal, cancel before the applicable renewal deadline. Follow Play's confirmation steps and check the resulting subscription status.

Cancellation normally stops future renewal and leaves access for the remaining provider-confirmed trial or paid period. Immediate cancellation, prorated refunds or other outcomes may apply where Google Play or mandatory local law provides them. Cancellation is not automatically a refund for an already charged period.

Cancellation is a separate action

Uninstalling ARMADA, switching accounts, signing out, deleting local app data or requesting account-data deletion does not cancel Google Play billing. Cancel renewal separately through Google Play.

Payment recovery and expiry

If Google confirms an applicable payment grace period, access follows the verified status and expiry. The configured subscription model includes a seven-day grace period when applicable. An account hold suspends access supplied by that subscription while payment recovery may still be possible.

Correct the payment issue through Google Play, then restore or refresh the subscription in ARMADA. An expired, canceled-pending, refunded, voided or revoked purchase is handled according to its actual verified state. An independent valid licence is assessed separately.

When no valid access source remains, starting a new protected scan, a new scheduled scan or a new Protection check, and obtaining new definition access, are unavailable. A scan admitted while access was valid can finish after licence expiry as described in section 5. Local history, quarantine inventory, supported restore and payment management remain available; an expired subscription does not make unscanned content safe.

Refunds and purchase complaints

Use Google Play's purchase history and refund-request process, or contact ARMADA support for a purchase complaint. Eligibility and timing depend on the purchase, location, applicable Google Play policy and your mandatory legal rights. We do not promise a refund merely because the app was uninstalled.

Verified refunds, chargebacks, voids and revocations can end the related entitlement after successful reconciliation. A Founding membership record may remain even when its payment is refunded; that accounting record does not override your refund rights or grant continuing subscription access.

Google Play subscription management

Google Play refund information

Your account & restoration

Keep the ARMADA account and Google Play billing account associated with your purchase.

7. Account verification and ownership

New annual checkout requires verification of the intended Google account in ARMADA. That selected account can differ from the Google account used by Google Play for payment. Choosing an ARMADA account does not switch the Google Play billing account.

Licence verification uses protected account and installation evidence, provider purchase evidence and integrity checks where required. A receipt screenshot, an email address alone, an unverified purchase token or a client-side success message does not establish purchase ownership.

Keep your accounts secure and do not share session credentials or purchase tokens. Switching the selected account does not transfer a purchase already associated with another account.

Restoring an existing subscription

Use RESTORE SUBSCRIPTION in Settings > License & account with the original ARMADA account and the Google Play account holding the purchase. Restore checks existing ownership and current provider status. It does not create a new charge, extend the paid period or start a fresh trial.

Recovery after reinstalling or changing a supported device depends on the supported verified-account and purchase-binding process. If a legacy installation-owned purchase has no account link, linking requires explicit action and proof from the surviving original installation key. If that key is lost and no ownership link exists, automatic account recovery is unavailable; contact support rather than purchasing again to resolve uncertainty.

Account restoration does not restore every local preference, scan-history record or quarantine file. Review local permissions, signed definitions, Protection and Daily Scan again after reinstallation. Trial recovery follows the first-phone limits described on section 2.

8. Privacy and account deletion

Scanning is performed on your device. Default scanning does not upload file contents, file names and paths, scan results, local history or quarantine contents to the licensing service. Online account and licence operations process the information described in the Privacy Policy.

Google Play processes payments; ARMADA does not receive your payment-card details or obtain the payer's Gmail address from a billing purchase. Account verification is a separate flow and its data handling is explained in the Privacy Policy.

Use the account-deletion control in the app or the external account-deletion page to request deletion of ARMADA-held account data. A request is not proof of completed deletion. Minimum records may be retained where necessary for legal obligations, security and the anti-abuse purposes described in the Privacy Policy. Account deletion does not cancel Google Play billing or promise deletion of records independently held by Google.

ARMADA Privacy Policy

Request ARMADA account deletion

Scanning, quarantine & updates

Protection is limited to the content Android exposes and to the scope you choose.

9. Scan evidence and Android limits

Quick Scan and App Scan inspect supported package artifacts visible and readable to ARMADA. Files & Storage scans supported selected content or Android-accessible shared storage when the corresponding access has been granted. ARMADA cannot read another app's private data through these routes or guarantee access to every installed app or file.

After separate disclosure and your affirmative consent, user-enabled Protection checks Android-visible installed-app APK artifacts. Folder monitoring is optional and starts off; only one folder you explicitly select and enable is included. No default Downloads or ARMADA app-controlled file folder is included automatically. Granting shared-storage access alone does not enable or expand folder monitoring. You can turn Protection off, disable folder monitoring while retaining its selection, or remove that selection and its read grant. It is not continuous whole-device, private-app-data or kernel monitoring. Daily Scan uses its separately selected folder or permitted shared-storage scope. Android can defer or interrupt scheduled and foreground work; a saved schedule or MONITORING status is not proof of complete scan coverage. Review the actual results and History.

A supported scan requires valid access when it actually starts. If the licence expires during an admitted scan, that scan can finish and its results remain available. If access is still inactive at completion, ARMADA asks you to renew or restore before starting another scan. This does not extend the subscription or authorize later scans. Manual scans and Daily Scan wait for each other rather than running content scans concurrently; a waiting request must obtain valid access when its turn starts. User Stop, lost Android access, unavailable definitions and Android interruption remain separate controls and limitations.

NO_THREAT_DETECTED means that the enabled checks did not identify a threat in the evidence successfully evaluated. It is not CLEAN, a guarantee of safety or proof that every threat has been excluded. UNKNOWN, inaccessible, unsupported, encrypted, skipped, timed-out or incomplete content is not represented as safe. Review coverage and result details.

10. Quarantine, copies and your content

Quarantine and permanent deletion are separate actions. For supported content in ARMADA-controlled storage, the app can provide its applicable local quarantine and restore flow. For supported user-selected provider content, saving a verified private vault copy does not by itself remove, move or disable the original source. Follow the actual confirmation and source-status information shown by the app.

Saving an APK copy does not uninstall or disable its installed Android application. Removing a source through its provider, or uninstalling an app, is a separate deliberate action. Restore requires an appropriate supported destination and your confirmation. Automatic permanent deletion is not part of the product baseline.

Keep independent backups of important data. Local app data and vault files can become unavailable after uninstalling, clearing app data, a device reset or device failure. Subscription restoration is not a backup-recovery service.

Scanning, quarantine & updates

Continued

11. AMDB, software updates and support

Signed AMDB definition updates require valid access, an available update service, connectivity and sufficient storage. Download and check them inside the app. An update failure does not establish that the existing package is current; review both active-definition status and the last successful signed check.

A previously verified local subscription grants access only up to its signed, provider-based expiry. Unavailable reconciliation does not extend it. Previously active verified definitions can remain available during an outage, but this does not extend entitlement or make their detection content current.

App updates are distributed through Google Play. Compatibility and Android permissions can change. Definition updates and support are provided while the product and relevant update service are maintained; an annual subscription is not a promise of lifetime updates. Material changes or discontinuation will be communicated with any notices and remedies required by applicable law.

Proper use & consumer rights

These terms preserve applicable consumer rights and do not guarantee complete threat detection.

12. Permitted use and intellectual property

Use the app only with content and devices you are authorized to inspect. Do not use the app or its services to commit fraud, bypass trial or purchase controls, forge licensing evidence, attack services, distribute malicious material or violate applicable law.

ARMADA and applicable third parties retain rights in their software, names, artwork and definition content. Your entitlement gives you permission to use the app for its supported purpose; it does not assign those rights or authorize redistribution of software or definition content. Rights granted by applicable open-source licences and mandatory law are preserved.

Protected requests may be rejected when ownership, integrity, current access or eligibility cannot be verified. An entitlement may be limited or revoked when its authoritative purchase state or a lawful, substantiated enforcement decision requires it. Contact support if you believe a decision is wrong; these terms do not authorize arbitrary confiscation of a valid paid purchase.

13. Availability and consumer remedies

No antivirus product detects every threat. ARMADA does not promise uninterrupted operation, complete device coverage, a particular detection rate or prevention of every loss. Its features depend on supported hardware, Android permissions and scheduling, provider availability and the definition content actually available for the scan.

These statements describe technical limits; they do not exclude contractual obligations or mandatory rights to conformity, support, withdrawal, repair, price reduction, refund, compensation or other remedies where applicable. Nothing here excludes or limits liability that cannot lawfully be excluded or limited.

Contact support to report a defect, incorrect purchase decision or billing complaint. This does not prevent you from exercising any available right to contact Google Play, a competent consumer authority, an applicable dispute-resolution body or a court.

Changes & contact

Keep your purchase details and contact support if you need help.

14. Changes to terms and prices

Published versions will identify their date. Material changes will be communicated as required by law and applicable Google Play rules. Subscription price changes are subject to Google's applicable notification, consent and billing rules; a document edit does not itself authorize a new charge or retroactively replace the price you accepted.

A later version does not remove accrued statutory rights. Accepted purchase phases and provider-confirmed access periods remain subject to the actual purchase and applicable law. If a change requires your consent, publication alone is not treated as that consent.
